

Grandinote Mach9 speakers!

I've had a luxury of listening to all three types of Grandinote Mach speakers. The wooden enclosure prototype, the aluminum version and finally at the HiFi Deluxe the all-new carbon fiber enclosure. Well, the difference with the all-new carbon fiber is not even funny. Already speedy attacks have gained more of a lighting fast transients and Mach9 (30.000 EUR) ability to disappear in space was quite remarkable. Massimiliano Magri is always trying to push the limits with his unique way of doing things and Mach unfiltered and unequalized design by itself was already an out of the box speaker concept, but the carbon fiber enclosure really let 9 woofers and 16 tweeters to breath most freely.
